Mobile Station UI Prototype

A user-friendly interface for reliable connectivity and convenient station services.

User Needs

- Simple navigation
- Real-time station information
- Quick access to services
- Accessibility and readable text.

Core UI Screens

- Home dashboard
- Network/connectivity status
- Nearby stations and services
- Route and schedule
- Profile and settings.

Connectivity Features

- Wi-Fi / mobile network indicator
- Live status updates
- Offline access to saved information
- Sync and notifications.

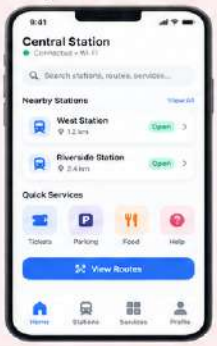

Convenience Features

- Search and filters
- One-tap actions
- Clear icons and labels
- Accessible contrast and scalable text.

Figma Prototype Workflow

1. Define user flow
2. Create wireframes
3. Build reusable components
4. Link screens with prototype interactions
5. Test and refine.

Sample Mobile UI

Testing & Evaluation

- Test navigation
- Verify connectivity states
- Check accessibility
- Gather user feedback
- Iterate in Figma.

Expected Outcome

- Faster task completion
- Reliable information access
- Intuitive navigation
- Improved user satisfaction.
